What's New In LLBLGen Pro?

===== LLBLGen Pro allows you to create database-driven models and classes that use one of the four supported O/R mapping frameworks. You use the designer to create the

entity/domain model, define the mappings and generate source-code for one of the four supported O/R mapping frameworks. You use the generated source-code combined with the O/R mapping framework of your choice to access your database and consume the data in that database. LLBLGen Pro consists of two parts: the LLBLGen Pro designer and the LLBLGen Pro runtime framework. You use the designer to create the entity/domain model, define the mappings and generate source-code for one of the four supported O/R mapping

frameworks. You use the generated source-code combined with the O/R mapping framework of your choice to access your database and consume the data in that database. The LLBLGen Pro runtime framework provides you with the tools you need to use the generated code. It also allows you to map your entity classes to the database through object relational mapping. To use the runtime you need a developer license. The runtime framework is a license in itself so you need to purchase a developer license to activate and use the runtime. You have the option of using the free

version of LLBLGen Pro, the Pro version or the Enterprise version of LLBLGen Pro. The Enterprise version includes all the developer licenses, the free version and the Pro version.
